

Fast, accurate and optimized human-transcription solution for enterprise

Traditionally, audio transcription was used for recording oral histories and music pieces. While audio transcription is still used in these ways, one of the most important uses today is to provide information that computers can read and process. Audio Bee's transcription services allow you to maximize reach to your target audience online, especially if you're looking to promote or sell products online.

Having text to accompany the audio and video content on your website can result in higher search engine rankings, increased traffic and communication to wider audiences.

Why Choose Audio Bee?

Multilingual transcription solutions to reach new markets

Our wide coverage of over 250+ major languages allows you to tap into our workforce for large scale or on-demand multilingual transcription projects. Apart from popular languages like Spanish, Portuguese, German and French - we also offer transcripts in Chinese, Hindi and other major languages from growing markets.

High quality transcripts with industry's best turnaround time

Each of our transcriptionists are pre-vetted and carefully screened prior to hire. This helps us consistently deliver the best quality results to our clients. In addition, we use smart technology for reduced human errors and offer priority-based turnaround time.

Customized outputs and workflows backed with dedicated support

Along with accuracy and the ability to manage large scale orders, we offer customization that best fit your workflows coupled with a dedicated manager to help you at every step of the way.

Enterprise-Grade Transcription Engine

Ensuring high performance standards that serve your entire transcription needs with flexible platform integration while keeping your data access secured.

Scalability

High performance for large volumes or recurring workloads of transcription work with up to 99% accuracy SLA, providing 250+ languages that can scale with your ambition to reach wider audiences.

Platform Integration

Get your transcripts in a range of formats to easily integrate them to the platforms of your choice.

Security

Your files are protected from unauthorized access and kept confidential. To ensure confidentiality, NDAs are a mandatory step in our hiring process.

About Audio Bee

Audio Bee is an on-demand AI data service provider for speech technologies. With Audio Bee, machine learning teams can tap into our fully managed speech data services to create high quality training datasets in order to build and deploy smarter AI systems.

Our flexible proprietary platform and solid quality assurance processes combined with a diverse community of workers that covers 250+ languages, allow us to tackle a wide range of multilingual projects and consistently deliver results of the highest quality.
